PREMIUM PRIME MOULDINGS

DISTRIBUTED BY TAIGA BUILDING PRODUCTS

Taiga mouldings are manufactured from the finest, medium-density fibreboard (MDF) available and treated with a unique coating that accepts any type of high-quality trim paint. The process employed in the actual moulding and priming is state-of-the-art, when compared to existing industry standards. Many hours of research, development and laboratory tests for uniformity, strength and other structural qualities have produced a product that is virtually unsurpassed.

PREMIUM PRIME MDF

SPECIES PROFILE

Medium Density Fibreboard (MDF) is part of a family of environmentally friendly products known as Engineered Wood.

Typically, wood shavings, chips and sawdust that remain after a tree is milled into lumber are collected, cleaned and refined to create uniform particles or fibres. Excess moisture is removed and an adhesive resin is added. The combination of 92% wood and 8% resin, on average, is formed into long thick mats, which are then compressed under intense heat and pressure. Progress at each stage is closely monitored by computers, which can measure slight variations that even the human eye cannot detect.

The resulting wood panels are laboratory-tested for uniformity, strength, screw-retention and other structural qualities, as required to meet the stringent industry standards for furniture and cabinet-grade wood panel products.

MOULDINGS GALLERY

REFERENCE GUIDE

1

CASINGS are moulded or surfaced on all four sides in a variety of widths and thicknesses for trimming door and window openings.
See MDF on pages 8 and 9, see Finger Joint on page 15.

2

CROWNS are used as a decorative element to connect surfaces which meet at an angle. Installing crown mouldings is an effective way to apply elegance and character to a traditional looking room.
See MDF on pages 12 and 13, see Finger Joint on page 16.

3

ARCHITRAVES are classic, Greek-style architectural elements that are used to accent the top of a door, window or other openings.
See page 14.

4

BASEBOARDS are base mouldings around the perimeter of a room at the point of intersection of the walls and finished floor.
See MDF on page 10, see Finger Joint on page 15.

5

CHAIR RAILS are used as decorative elements or dividers between wall coverings such as wallpaper, paint, or wainscoting.
See MDF on pages 11, see Finger Joint on pages 15 and 17.

Choose from a variety of attractive mouldings to showcase your unique sense of style in your home.
